Laboratory note: The estimated concentration of the unknown peak in the sample is 10.68%; Currently PharmLabs laboratory can not confirm an unidentified peak in your chromotogram due to interference (only with highly concentrated DB products) from which we believe to be either (+)88-THC or d9-THC. 4th this time there are no reference standards available for (+)64-THC. (+)64-THC. 4th Cannabinoid and, therefore, these two compounds may have di-erent e/concels. Using the most advanced in struments and techniques available, the separation of (+)d8-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and d9-THC with the majority, if not all, of the concentration being (+)d8-THC. Total (+/-) BC concentration is estimated to be: 65.37%
