Sample **Obliter8 - Blueberry Kush**

Sample ID SD231019-022(52482)	Matrix Concentrate (Inhalable Cannabis Good)
Tested for OCHO	
Sampled -	
Analyses executed CANX, RES, MIBIG, MTO, PES, HME, FVI	Reported Jan 10, 2025

Laboratory note: The estimated concentration of the unknown peak in the sample is 7.35%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)-8-THC or d9-THC. At this time there are no reference standards available for (+)-8-THC. (+)-8-THC is a diastereomer of the main (+)-8-THC cannabinoid and, therefore, these two compounds may have different effects. Using the most advanced instruments and techniques available, the separation of (+)-8-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)-8-THC and d9-THC with the majority, if not all, of the concentration being (+)-8-THC. Total (+)-8-THC Concentration is estimated to be 33.43%.
